SUMMARY

Azure-focused Site Reliability Engineer and Software Engineer with 8+ years of Microsoft-stack experience in global-scale Azure SQL DB and Cosmos DB environments. Proven track record sustaining 99.99% availability across worldwide regions, cutting MTTR by 30% through ICM automation, and leading zero-downtime fleet migrations. Looking for a full-time role where I can grow long-term ownership of cloud infrastructure and data platforms.

TECHNICAL SKILLS

Cloud & Data: Azure SQL DB, Cosmos DB, Azure Functions, Key Vault, App Service, Application Insights, Azure Monitor, Log Analytics

Analysis & Automation: KQL (Kusto), PowerShell, Power BI, DAX, telemetry analysis, performance tuning, capacity management

Languages & Frameworks: C#, .NET Core, ASP.NET MVC, ASP.NET Web API, SQL, Node.js, TypeScript, JavaScript

Front End: React, Angular, React Native, Redux, RxJS, Context API, HTML5, CSS3/SCSS

DevOps & Tooling: Azure DevOps Pipelines, GitHub Actions, CI/CD, YAML, Git, Service Fabric Explorer, Moq, xUnit/NUnit

Design & UI: Figma, Adobe XD, Material UI, Tailwind CSS, responsive design, wireframing & prototyping

PROFESSIONAL EXPERIENCE

Software Engineer — Microsoft (via Quadrant Technologies), Seattle, WA *Apr 2022 – Present*

Azure SQL DB Capacity Management — worldwide capacity and utilization analysis to keep regions below hot-segment thresholds and protect customer data.

- Led worldwide Azure SQL DB capacity and utilization analysis using KQL and PowerShell to sustain 99.99% availability and prevent hot segments.
- Automated global capacity workflows triggered by real-time telemetry, improving regional resource allocation and optimizing infrastructure spend.
- Built Power BI telemetry dashboards to support executive infrastructure planning and ongoing health monitoring.
- Led fleet migrations and node-resizing initiatives across worldwide regions with zero customer downtime.

Software Engineer — Microsoft (via Quadrant Technologies), Hyderabad, India *Dec 2019 – Sept 2021*

Azure Cosmos DB — globally distributed, multi-model database service; contributed across Dashboard and Engineering Systems modules.

- Built a subscription-wide cost-tracking engine for Cosmos DB environments, improving financial transparency for million-dollar tiers.
- Reduced MTTR by 30% by integrating Incident Management (ICM) automation with Microsoft Flow and Azure Functions.
- Automated Azure Scale Set maintenance, including disk cleanups and OS updates, using PowerShell to improve fleet reliability.
- Implemented Azure AD token-based authentication and service-to-service communication protocols.
- Monitored CI/CD pipelines across build and test phases; created ICMs on failures and authored TSGs for on-call response.

Full Stack Developer — Quadrant Technologies (In-house Projects), Hyderabad, India *May 2018 – Nov 2019*

- Built an event management and ticketing system end to end — schema design through UI — using .NET MVC, jQuery, and SQL Server, with separate Admin and User experiences and integrated PayPal payments.
- Developed an Office Management portal from scratch (schema through UI) using .NET MVC and SQL Server, with separate Admin and User views for attendance, tasks, and billing.

- Built a seat-booking travel system end to end using .NET MVC and SQL Server, with Admin/User views and integrated PayPal payments.
- Designed stored procedures, triggers, and T-SQL logic to support core application data processing.

CERTIFICATIONS & EDUCATION

- Microsoft Certified: Azure Developer Associate (AZ-204), 2020
- Bachelor of Commerce with Computers — Osmania University, Hyderabad, 2018
